

MS WORD MINI PROJECT DOCUMENTED EXPLAINED

At first WORD Press is downloaded and then installed after which the word press folder is pasted in htdocs of mamp folder.

After creating your login and name for sites you can access your WP by using localhost:8888 In browsers as URL

After accessing your WP dashboard to make a custom a theme in wp-content open themes folder and create a new folder with the name you want to keep of your folder.

In your own themes folder create your own index.php,header.php,footer.php,style.php and fuction.php for the starters

After coding these up given files compress your folder and go to your wp dashboard and click on appearances then themes and then click on ADD NEW theme then upload your theme and have a live preview of it to see that if it is properly working.

PAGES,POSTS and COMMENTS can be created and added using FakePress.

To install FakePress we use the plugin option on the dashboard in wordpress

Go to plugins and select add new, search for fakepress click install and then go to installed plugins by hovering over plugins then activate FakePress plugin.

FakePress then would be available on dashboard of WP.

Then through the FakePress you can select the fake comments or posts you want by quantity.

Adding WP

To add wp loop short snippets of codes are used as shown in the MS Document after creating different files PHP files manually.
